A custom designed modular preschool in North Andover, MA is the new building for the Franklin “CUBS” Preschool, named for Children United by Special Abilities. “It has been very exciting for us to watch the building come together so quickly,” said Preschool Coordinator Marylou Connors. “I feel like we have the luckiest little preschoolers in the world to have such a beautiful new school with everything built just for them. Triumph has been unbelievable through this whole process by making sure that our students have only the very best. We are all extremely proud of our new home.”

With the efficiency and time savings afforded by modular construction, the total time from conception to completion of the school was only six months. Triumph worked with the Franklin School to create a customized space with their specific design requirements, such as 10-inch toilets and sustainable features; white roofing, energy recovery ventilators, and microbial (mold resistant) drywall, to give the students an optimal learning environment.

This project is further proof that the accelerated project delivery method afforded by building modular is of the highest quality and a permanent solution to building schools and additions. Children deserve the absolute best, and Triumph is thrilled to be able to provide a healthy new space where students can learn and thrive for many years to come.
