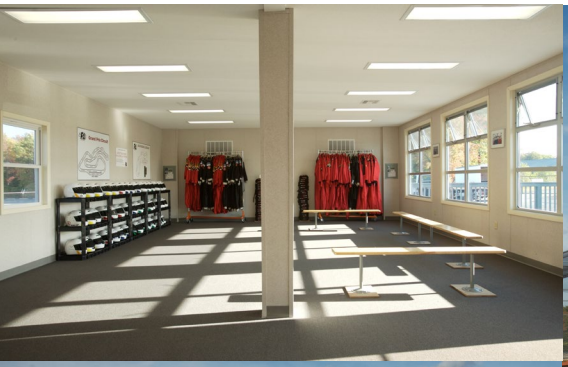
CASE STUDY

TRIUMPH MODULAR
A TECNOFAST COMPANY®

Client: F1

F1

Retail Building



F1 is the premier race kart driving complex in North America and needed more space for client instruction and equipment storage.

Triumph Modular designed, built, and installed this 24′ x 52′ prefabricated modular retail building in just ten weeks with 9′ high ceilings, custom galvanized siding, and large custom windows allowing viewers and staff to observe the outdoor racetrack. The interior height allows increased storage space for hanging helmets and other racing apparel. Triumph matched the racetrack's appearance by incorporating a British racing green color into the design. In addition, Triumph Modular's construction coordination allowed everyday activities to continue at F1 during installation.
