LEXINGTON HIGH SCHOOL

Project Case Study

Project Details
Location: Lexington, MA
Square Footage: 18,000
Number of Modules: 32
Completion: 8/2014
Architect: TBA Architects
Modular Factory: Markline

Triumph Modular provided Lexington High School with 18,000 sq. ft. of classroom space, over the summer break. The building was ready for student’s first day, on time and on budget!

The modular building features 15 new classrooms for the students of Lexington High. The Town of Lexington was able to leverage the advantages of modular construction to combat overcrowding with no sacrifice to quality.

The modular building is designed and installed for permanent use, and provides the high school students energy efficient classroom with generous natural light and quality finishes.

Some examples of what make this building unique are the high efficiency HVAC system, corrugated steel siding on the exterior and expansive floor to ceiling glass which allows the classrooms to be illuminated with natural light.
